Terrace, BC V8G 4E1

Thornhill Landfill Overview

The Thornhill Landfill (Landfill) is now undergoing closure. The Thornhill Transfer Station (the transfer station) opened in November 2016 on the site of the closed Landfill, and is owned and operated by the Regional District of Kitimat-Stikine (Regional District or RDKS). The transfer station is located about 10 km southeast of the City of Terrace; access is from Old Lakelse Lake Drive.

Most waste generated in the greater Terrace area is hauled to the transfer station, sorted and consolidated, and then hauled to Forceman Ridge Waste Management Facility for final disposal. This process is conducted in accordance with the Regional District Kitimat-Stikine Solid Waste Management Plan (1995). There is also a residential drop off area for garbage, organics, metal (including large appliances and propane tanks), and clean wood. Waste is no longer discharged at the Thornhill location.

Landfill operations are regulated by the Ministry of Environment and Climate Change Strategy's Operation Certificate MR-4057, most recently amended in June 2014.

Figure 1: Thornhill Transfer Station

The transfer station consists of a scale and scale house, a Z-wall for residential drop-off, a transfer station building for consolidation of commercial loads, and an area to accept and consolidate commercial loads of organics.

Environmental monitoring is being conducted in accordance to the operational certificate. The details of the Facility water quality monitoring program, including groundwater, surface water, and leachate results will be discussed in a document prepared by Golder Associates and can be found in Appendix A.

A landfill gas feasibility study for flaring was completed in September 2018 on the closed Thornhill Landfill.

Table of Contents

1.0 Introduction

This annual report covers the period from January to December 2018 and has been prepared to fulfill the requirements of the Thornhill Transfer Station's Operational Certificate MR-4057.

Issued by the Ministry of Environment and Climate Change Strategy and most recently amended in June 2014 the Operational Certificate does not yet reflect the changes to waste collection at the Thornhill Transfer Station. Waste is no longer discharged at the Landfill and septage is no longer accepted. Garbage and compost is collected, consolidated, and hauled to the Forceman Ridge Waste Management Facility. Metals (including white goods, scrap metals, and propane tanks) and clean wood including land clearing debris are collected and kept segregated. Clean wood is chipped and used as hog fuel for the Forceman Ridge compost facility and metal is sold as scrap.

This report meets the requirements in Section (9.4) of the Operational Certificate by providing the following information:

- Total volume or tonnage of waste collected, consolidated, and hauled to Forceman Ridge during 2018;
- Total volume or tonnage of organics collected and diverted during 2018;
- Total volume or tonnage of metals and clean wood collected and diverted during 2018;
- Occurrences or observations of wildlife attempting to access the facility; and
- The results and evaluation of all the monitoring programs has been undertaken by Golder Associates, shown in Appendix A.

2.0 Waste Disposal

The Thornhill Transfer Station serves as the consolidation location for most of the garbage and all the organics collected in the Terrace Area. There is also a residential drop off area at the transfer station with separate bins for garbage, clean wood, metal, and organics.

2.1 Solid Waste Disposal

Solid waste, with the exception of Controlled Waste hauled directly to Forceman Ridge, is hauled to the Thornhill Transfer Station, sorted, compacted, and hauled to the Forceman Ridge Facility. The annual totals from January through to December 2018 for municipal solid waste, organics, clean wood, and metal received at the Thornhill Transfer Station are shown in Table 1. Details on some of these materials is included below.

Table 1: Waste Discharge Qualities for 2018

Material	2018 Quantity (tonnes)	
Waste Discharge		
Garbage	6881.3	
Construction and Demolition	1330.1	
Diverted Materials		
Clean Wood		44
Organics		1561
Metal		54.9
Total		
Total Consolidated Landfill Waste	8211.4*	
Total Materials Diverted		1659.9

Note: * Volume of waste collected at Thornhill Transfer Station and hauled to Forceman Ridge.

2.1.1 Garbage

Garbage is defined as discharged materials or substances not including; Controlled Wastes (animal carcasses weighing more than 50 kg, asbestos, contaminated soils, land clearing or construction and demolition wastes over five cubic meters, clean soils, broken concrete, broken asphalt, ash from incinerators, or septage), Restricted Wastes (metal, organics, and recyclable materials) or Prohibited Waste (hazardous or radioactive waste, slaughter waste, smoldering or flammable material, explosive or highly combustible materials, broken concrete or asphalt 300 millimeters in diameter or greater, Extended Producer Responsibility (EPR) materials, tires, and cardboard and paper products, whether or not they fall within the definition of EPR materials). Garbage is disposed of in the landfill.

In 2018, 8211.4 tonnes of garbage was collected and consolidated at the Thornhill Transfer Station and hauled to the Forceman Ridge Waste Management Facility for landfilling.

2.1.2 Construction and Demolition

Construction and demolition material is mainly wood waste, and construction materials such as dry wall and insulation. It is defined as waste produced from the construction, renovation, and demolition of buildings and other structures, but does not include waste containing or contaminated with asbestos, creosote, polychlorinated biphenyl (PCB's), or any other Hazardous Waste.

In 2018, 1330.1 tonnes of construction and demolition waste was collected and consolidated at the Thornhill Transfer Station and hauled to the Forceman Ridge Waste Management Facility for landfilling.

3.0 Diverted Materials

Diverted materials are collected using several methods depending on the material type and/or the producer source; collected at the Thornhill Transfer Station, collected in curbside pick-up, collected by commercial haulers, or deposited at designated Extended Producer Responsibility Depots and private recycling facilities.

3.1.1 Metals

In 2018, a total of 54.9 tonnes of metal was collected at the transfer station, including propane tanks, white goods, and scrap metal. Ozone depleting substances are removed from all pertinent materials prior to collection by scrap metal recycler.

3.1.2 Clean Wood Waste

Clean wood waste is considered any wood product that has not be treated or painted. Clean wood is segregated, chipped, and used as hog fuel mixed with the organics at the Forceman Ridge Compost Facility.

In 2018, 44 tonnes total of clean wood waste was collected, diverted, and utilized in the Compost Facility.

3.1.3 Organic Waste

Organic waste is defined as vegetative matter, food processing waste, garden waste, kitchen scraps, food soiled paper, and waxed cardboard, and other organic waste that can be composted. Organic waste is collected curbside for residents, by commercial haulers for businesses, and can also be dropped off directly at the transfer station in designated bins. Organic waste is consolidated at the transfer station and hauled to the Forceman Ridge Compost Facility.

In 2018, 1561 tonnes of organic waste was collected, diverted, and processed in the Compost Facility.

4.0 Wildlife Occurrences and Observations

The Thornhill Transfer station is located in an area with bears, wolves, coyotes, several species of birds of prey, and many other species of mammals that may attempt access to the facility. To prevent wildlife from gaining access the entire facility is enclosed in an electrified fence. The residential collection area contains wildlife proof bins with lids to prevent bird and rodent access. Commercial garbage is

consolidated within the transfer station building, to which there is no bird access. Organics are consolidated in a large wildlife proof bin with lid.

Facility operators are required to inspect the fence line weekly, testing for proper voltage, proper tension on fence stands, overall condition of the fence, and signs of wildlife activity. The results of the inspections are recorded on the Daily Operation Inspection Form.

During 2018, a small black bear was spotted grazing on clover in the within the fenced area of the closed landfill. The bear did not gain access to the transfer station area, or any waste. A fence inspection showed an access point. This area was immediately repaired; subsequent inspection showed no further access.

5.0 Environmental Monitoring Report

Environmental monitoring for the Thornhill Transfer Station was conducted by a Regional District of Kitimat-Stikine Environmental Technician, following Ministry of Environment and Climate Change Strategy, 2013 British Columbia Field Sampling Manual. All in-situ and laboratory data for groundwater, surface water, and leachate monitoring results has been analyzed and reviewed by Golder Associates. The complied data, interpretation, and recommendations can be found in Appendix A.

6.0 Landfill Gas Collection

A landfill gas collection feasibility study was completed in September 2018 which indicated there is potential for a successful gas flaring system. The Regional District is considering implementing a flaring system as well as a biocover system to reduce greenhouse gas emissions.

7.0 Landfill Closure Update

The landfill has been capped with a geomembrane cover, with a mixture of gravel and soil applied to shape. The shaped landfill is awaiting the finished compost from the Forceman Ridge facility, which will be applied to the entire site prior to seeding. Site drainage is directed into a two-series wetland for managing and treating any leachate from the closed section of landfill. Surface runoff from the transfer station is also directed to the wetlands.

Executive Summary

The 2018 monitoring program indicates that the 2018 results follow historic trends and confirm previous findings by SHA (2017).

The results of the surface water monitoring indicate that seepage from the leachate pond (SW-3) and surface water immediately downgradient of the Landfill (SW-21) exceeds the Contaminated Sites Regulations (CSR) and BC Water Quality Guidelines (BC WQG) for select constituents. However, concentrations at the downgradient location SW-6 (750 m from the Landfill) appear to be close to background conditions, suggesting that Landfill leachate has attenuated prior to reaching the Thornhill Creek water system.

Groundwater quality data is only available for one monitoring well located downgradient of the Landfill (BH96-2). The well is screened in silt and clay, which underlies the majority of the Landfill, and shows little impact of Landfill leachate. Concentrations of all parameters for BH96-2 were less than the BC CSR. Concentrations for total aluminum, iron, phosphorous, and dissolved cadmium and phosphorous were greater than the BC WQG. These parameters may be related to Landfill leachate; however, they more likely originate from natural sources in the clay unit underlying the majority of the Landfill. Chloride, which is a typical indicator of landfill leachate, is rising in groundwater over time, but is present at relatively low concentrations that are well below regulatory criteria.

Groundwater quality associated with the gravel unit that underlies the south corner of the Landfill could not be assessed due to the lack of monitoring wells in this area. Similarly, the water quality in the glacial till unit which underlies both the gravel unit and the silt and clay unit was also not evaluated due to the lack of available monitoring wells in this unit.

While recent water-level measurements are only available for one groundwater monitoring well, the general groundwater flow direction is inferred to be to the north based on historical data (SHA 1997) and topography.

Study Limitations

This report was prepared for the exclusive use of the Regional District of Kitimat-Stikine (RDKS). The report, which includes all tables, figures and appendices, is based on current and historical data and information provided by RDKS to Golder Associates Ltd (Golder) in January 2019. The findings, interpretations and conclusions concerning the Site conditions are based solely on the information provided to Golder.

Golder makes no warranty, expressed or implied, and assumes no liability with respect to the use of the information contained in this report at the subject Site, or any other Site, for other than its intended purpose. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Golder Associates Ltd. accepts no responsibilities for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

The RDKS has the right to submit this report to the BC Ministry of Environment & Climate Change Strategy (ENV) for review and comment. ENV may rely on the information contained in this report solely to carry out such a review**.**

Golder disclaims responsibility of consequential financial effects on transactions or property values, or requirements for follow-up action and costs, which result from reporting the factual information contained herein.

The services performed as described in this report were conducted in a manner consistent with that level of care and skill normally exercised by other members of the engineering and science professions currently practicing under similar conditions, subject to the time limits and financial and physical constraints applicable to the services. The content of this report is based on information provided by the RDKS to Golder in January 2019, our present understanding of the Site conditions, and our professional judgment in light of such information available at the time of this report. This report provides a professional opinion, and therefore no warranty is either expressed, implied or made as to the conclusions, advice and recommendations offered in this report. This report does not provide a legal opinion regarding compliance with applicable laws. With respect to regulatory compliance issues, it should be noted that regulatory statutes and the interpretation of regulatory statutes are subject to change.

Golder accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report. The findings and conclusions of this report are valid only as of the date of this report. If new information is discovered during future work, including excavations, borings or other activities or studies, Golder should be requested to re-evaluate the conclusions of this report, and to provide amendments as required.

1.0 INTRODUCTION

Golder Associates Ltd. (Golder) was retained by the Regional District of Kitimat-Stikine (RDKS) to prepare the 2018 Annual Environmental Effects Monitoring (EEM) Report for the Thornhill Landfill (the "Site"). The Site is located approximately 10 km southeast of Terrace, British Columbia, on Old Lakelse Lake Road. Annual reporting is required by Clause 9 of the Landfill Permit No. MR-4057 dated 20 June 2014 (the Permit"). The Thornhill Transfer Station exists on the site of the closed Thornhill Landfill, established in the 1960s and closed in 2015/2016. The monitoring program relates to the closed landfill site.

1.1 Background

The Thornhill Transfer Station was established on the former Thornhill Landfill, which was first constructed in the 1960s, expanded in the late 1990s and closed in 2015/2016. The Thornhill Landfill was closed and capped over the period of 2015 through 2017, and final closure, including application of topsoil and revegetation, will occur in 2019.

EEM Programs are required for the Thornhill Landfill by the BC Ministry of Environment and Climate Change Strategy (ENV) as part of the operational certificate. As outlined in the 20 Jun 2014 ENV letter to the RDKS, the objective of the EEM Program for the Thornhill Transfer Station is to determine the potential effects of the Landfill on the receiving environment. The scope of work for the EEM Programs is to include:

- **Surface Water Monitoring**: Collection and analysis of four surface water samples from upstream and downstream of the Landfill and from the leachate seepage and leachate weir, conducted three times per year, in the spring, summer and fall.
- **Groundwater Monitoring**: The Landfill permit calls for the preparation of a groundwater monitoring plan and in the interim, for groundwater monitoring at two locations. The 2018 groundwater monitoring program consisted of the collection and analysis of groundwater samples from one monitoring well, conducted three times per year in the spring, summer and fall.
- **Quality Assurance/Quality Control (QAQC) Program**: The operational certificate holder (RDKS) is required to conduct a QAQC program to determine the acceptability of the data required by the permit.
- **Reporting**: An annual report is to be submitted to BC ENV no later than 30 June of the following year.

1.2 Objective and Scope of Work

The objective of this project was to conduct a desktop analysis of available information to provide the information required by the Permit (APPENDIX A). This includes a summary and interpretation of environmental monitoring conducted at selected monitoring locations to assess potential impacts that the Landfill may be having on the surrounding environment.

The RDKS completed the surface water monitoring and groundwater sampling and quality assurance and control (QAQC) during the 2018 monitoring year. Chemical analysis of surface water and groundwater samples was conducted by ALS Environmental Ltd. The RDKS provided Golder with historic and 2018 data related to sampling and monitoring at the Site. The purpose of this report is to present the following key information to satisfy the requirements presented in the Permit:

- Summary of the regulatory framework and operational permit EEM requirements.
- Methods of field investigations (as provided by RDKS).
- Tabulated surface water and groundwater field parameters and chemistry compared to applicable standards and guidelines.
- Figures showing distribution of key landfill parameters in surface water and groundwater, as well as time series plots for the key landfill parameters.
- Discussion of chemistry and temporal evolution, including both laboratory analyses and field parameters.
- Tabulated depth to groundwater.
- Discussion of the QAQC program.
- Conclusions and recommendations for the current EEM program.
- Appendices including laboratory certificate of analyses and photographs.

1.3 Previous Investigations

Previous studies and annual monitoring reporting have been carried out by Sperling Hansen Associates (SHA) until as recently as 2017 (SHA 2018). A hydrogeological and geotechnical investigation was carried out by SHA in 1997 prior to the expansion of the Landfill.

1.4 Site Description

The following summary of the Site's topographic, geologic, and hydrogeologic setting is based on a review of the following maps and Reports:

- GeoBC's web-based mapping tool iMapBC http://maps.gov.bc.ca/ess/sv/imapbc/
- The Surficial Geology Map of the Skeena River and Bulkley River Area (Clague 1983)
- Google Earth
- SHA 1997 and 2017

The Site is located approximately 10 km southeast of Terrace, British Columbia, on Old Lakelse Lake Road (Figure 1). The Thornhill Landfill was closed over the period of 2015 through 2017, and a Transfer Station was constructed. Final closure, including application of topsoil and revegetation of the landfill, will occur in 2019. The Site accepts locally derived refuse, where it is stored until it is transferred to the Forceman Ridge Waste Management Facility, located approximately 30 km south of Terrace, British Columbia. A search of the BC water well atlas identified four domestic water wells located within 500 metres of the Landfill boundary. A list of water well records and locations are presented in APPENDIX B.

The site is located at the base of a local mountain with an approximate elevation of 900 to 1400 metres above sea level (masl). The area surrounding the Site is defined by a rolling topography. The Site slopes to the northwest, with an approximate ground surface elevation of 215 masl on the southeastern portion of the Site and 185 masl on the northwestern portion of the Site. Surface drainage generally drains towards the northwest. The surrounding area is generally sloped to the northwest. The nearest major surface water body to the Site is Thornhill Creek (approximately 600 m northwest of the Site), which drains into the Skeena River, located approximately 5 km southeast of the Site.

The regional surficial geology in the study area is described as being located near a contact of a glacial outwash gravel deposits and a glaciomarine silt and clay sequence, underlain by a glacial till (Clague 1983 and SHA 1997). Test pitting and drilling activities carried out by SHA in 1997 confirmed that the Site is underlain by a glaciomarine silt and clay unit that is up to 16m in thickness. The only portion of the Landfill that is not underlain by this unit is the southern tip of the Landfill encompassing an approximate area of 20 x 50 m (SHA 1997). This area is underlain by glacial outwash gravel. The clay unit underlying the Landfill was tested by SHA (1997) and yielded a reported average hydraulic conductivity $4.2x10^{-10}$ m/s based on four silt and clay samples.

Based on available information obtained during drilling and initial sampling of the monitoring wells and nearby domestic wells (SHA 1997), two groundwater flow regimes were inferred to be are present at the Site. A shallow groundwater flow system was described as being present in the silt and clay unit. Groundwater was reported to be flowing in a northwest direction and discharges into the Thornhill Creek surface water system. A deeper flow system of groundwater was identified by SHA (1997) in the gravel deposit on the southern edge of the Site. Groundwater flows was inferred by SHA (1997) to flow from the southeast to the northwest until it encounters the interface between the silt and clay and gravel unit. The flow reportedly develops a downward gradient along the contact and enters the glacial till layer that underlies the entire Site.

SHA (1997) inferred that silt and clay lenses extend into the gravel unit to the north along the entire length of the contact zone. Perched aquifers on these clay lenses were observed during drilling activities in 1997. Two monitoring wells that were installed by SHA (1997) are described as follows:

- BH96-3 – installed at the southern edge of the Landfill footprint where the upper silt and clay unit are in contact with the lower gravel unit. The well is screened in a clayey gravel zone.
- BH96-2 – installed in the silt and clay unit at the northern edge of the Site.

A third borehole (BH96-1) was drilled south of BH96-3 to determine the thickness of the gravel unit. Borehole logs for all three locations are provided in APPENDIX C.

2.0 GROUNDWATER AND SURFACE WATER MONITORING METHODOLOGY

2.1 Sampling Locations

Table 1 presents a list of historic and current sampling locations. Groundwater and surface water have been collected from 1996 to 2018. During the 2018 program, one groundwater monitoring well (BH96-2) and five surface water locations (SW-3, -1, -21, -17, and -6) were sampled. Historically, additional select surface water sampling locations have been sampled. Two nearby domestic water wells were sampled from 1996 to 2017; however, sampling of these domestic wells was discontinued following the 2017 sampling events due to access difficulties and because the water quality at these locations met applicable drinking water quality standards. Sampling locations are shown in Figure 2 and summarized below.

Table 1: Sampling Locations with Spatial and Hydrogeologic Information

Location	Sample Type	Easting *UTM*	Northing *UTM*	Elevation (approximate) *metre above sea level*	Available Sample Period	Inferred Groundwater Gradient
BH96-3 (Destroyed)	Monitoring Well	533314	6038203	202	1996 - 2015	Upgradient
BH96-2	**Monitoring Well**	**533226**	**6038410**	**175**	**1996 - 2018**	**Downgradient**
SW-3	**Surface Water**	**533198**	**6038389**	**-**	**1996 - 2018**	**Downgradient**
SW-1	**Surface Water**	**533702**	**6038575**	**-**	**1996 - 2018**	**Sidegradient**
SW-21	**Surface Water**	**533182**	**6038522**	**-**	**1996 - 2018**	**Downgradient**
SW-17	**Surface Water**	**533031**	**6038804**	**-**	**1996 - 2018**	**Downgradient**
SW-6	**Surface Water**	**532615**	**6039310**	**-**	**1996 - 2018**	**Downgradient**
SW-16	Surface Water	533122	6038801	-	2016 - 2017	Downgradient
SW-18	Surface Water	533006	6038901	-	2016 - 2017	Downgradient
SW-23	Surface Water	531755	6039631	-	2017	Downgradient
SW-22	Surface Water	533152	6038586	-	2016	Downgradient
Goodwin*	Domestic Water Well	-	-	-	1996 - 2017	Upgradient
Reinhart (Well Tag Number 38440)	Domestic Water Well	533636	6038033	-	1996 - 2017	Upgradient

Notes:

Bold indicates sampling locations that were sampled in 2018

Underlined indicates sampling locations that are required once per season (Spring (Mar – Apr), Summer (Jul – Aug), and Fall (Oct – Nov)) as per the Permit (APPENDIX A)

Locations and elevations are approximate

*Coordinates not available. Approximate Location 1.5 km southwest of Site

A description of each surface water sampling location is provided in Table 2 below.

Table 2: Description of Surface Water Sampling Locations

Location	Description
SW-3	**Historically sampled from Landfill leachate seep. Since 2017, seepage from the leachate seep is collected in a leachate pond. As part of the landfill closure in 2017, a leachate pond and stormwater retention pond were constructed, north of the landfill, to allow leachate to dilute before being discharged to the environment.**
SW-1	**Side gradient to the Landfill; Background location.**
SW-21	**Monitoring weir located 200 m downstream of stormwater retention pond.**
SW-17	**Located on Thornhill Creek, 100 m downstream of the confluence of Thornhill Creek and leachate outfall (originating from SW-21).**
SW-6	**Located on Thornhill Creek by Ziegler Bridge.**
SW-16	Located on Thornhill Creek, downstream of the Thornhill Creek and leachate outfall (originating from SW-21) confluence and 100 m upstream of SW-17.
SW-18	Located 100 m downstream from SW-17.
SW-23	Located on Thornhill Creek near the Old Lakelse Rd and Miller Rd intersection.
SW-22	Located 60 m downstream of SW-21.

Notes:

Bold indicates sampling locations that were sampled in 2018

Underlined indicates sampling locations that are required once per season (Spring (Mar – Apr), Summer (Jul – Aug), and Fall (Oct – Nov)) as per the Permit (APPENDIX A)

Deviations from Landfill Permit requirements

The following observations were made that deviated from the Landfill Permit:

- The Landfill permit calls for the development of a groundwater monitoring plan, with interim monitoring at two monitoring wells. During the 2018 monitoring year, monitoring was only carried out at one monitoring well location.
- SW-17 was sampled in 2018 although not required in the Landfill Permit

2.2 Groundwater Sampling

The 2018 groundwater monitoring program consisted of groundwater sampling at monitoring well BH96-2. BH96-3 was destroyed during the landfill capping activities in 2016 and was last sampled in 2015. This sampling location has not been replaced. Monitoring locations are shown in Figure 2.

Sampling was conducted seasonally (see Section 2.1) by RDKS field staff in March (Spring), July (Summer) and September (Fall) 2018, following established sampling procedures as laid out in the *British Columbia Field Sampling Manual for Continuous Monitoring and the Collection of Air, Air-Emission, Water, Wastewater, Soil, Sediment, and Biological Samples* (BC ENV 2013). Prior to sampling, the depth to groundwater was measured using a water level probe, and the monitoring wells were purged. The monitoring wells were purged and sampled using dedicated Waterra™ tubing and footvalve with 0.016 m (5/8-inch diameter) polyethylene tubing. A maximum of three well volumes, based on the total height of the water column in the monitoring well, were removed prior to sampling.

Prior to any sampling activities, field instruments were calibrated to manufactures specifications in the field. During purging, a YSI Professional Plus multi-meter was used to collect measurements of in-situ water quality parameters (temperature, electrical conductivity, redox potential, dissolved oxygen, and pH). The field parameter data alongside with analytical results are presented in APPENDIX D. Purging was continued until relatively stable conditions were obtained and three well volumes were removed, indicating representative formation water was present. Purge water from the monitoring well sampling was collected during purging, transported and disposed of at a suitable location at the landfill.

Groundwater samples were collected in clean, laboratory-supplied sample bottles. Water samples for dissolved metals were field-filtered using a 0.45 µm in-line filter. As necessary, samples were preserved in the field using chemicals supplied by the laboratory. Standard sampling protocols, as laid out by the *British Columbia Field Sampling Manual* (BC ENV 2013) were followed during groundwater sampling to minimize the possibility of cross-contaminating the monitoring wells and the samples. The groundwater samples were submitted to ALS Environmental Ltd for analysis of the following physical parameters, as outlined in Table 3, in accordance of parameters required by the Permit. Analytical Results and Certificates of Analysis for 2018 are presented in APPENDIX D and APPENDIX E respectively.

Table 3: Analytical Parameters Selected for BH96-2 in 2018

Parameter	Season		
	Spring (Mar)	Summer (Jul)	Fall (Sep)
Dissolved metals including mercury	✓	✓	✓
Dissolved Hardness	✓	✓	✓
Total metals including mercury	✓	✓	✓
Alkalinity	✓	✓	✓
Chloride (Cl)	✓	✓	✓
Fluoride (F)	✓	✓	✓
Sulphate (SO_4)	✓	✓	✓
pH	×*	✓	✓
Conductivity	✓	✓	✓
Total Suspended Solids	✓	×	×
Total Dissolved Solids	✓	✓	✓
Chemical Oxygen Demand (COD)	✓	✓	✓
Ammonia (NH_3), Nitrate (NO_3), Nitrite (NO_2), Total Kjeldahl Nitrogen (TKN)	✓	✓	✓
Total Phosphorous	×	×	✓

Notes:
Underlined parameters indicate parameters required, in accordance with landfill Permit
× indicates parameter was not analysed in the laboratory
✓ indicates parameter was analysed
* Laboratory pH was required in accordance with the Landfill Permit; however, during the March field event, this parameter was not analyzed. Field pH was collected.

Laboratory analysis for pH was not conducted during the March sampling event. However, field pH, which is considered to be more representative of Site conditions, was measured.

Deviations from Landfill Permit requirements

The following samples deviated form the required sampling protocol as follows:

- Spring (March): The sample for BH96-2 was not submitted for pH and Total Phosphorous. Total Suspended Solids were analysed and are not required
- Summer (Jul): The sample for BH96-2 was not submitted for Total Phosphorous.

The omissions of pH and Total Phosphorous is assumed to have been caused by an oversight during sampling and the subsequent submission of samples to the laboratory.

The Landfill Permit requires that a groundwater monitoring program be developed and that in the interim, groundwater monitoring should be undertaken at downgradient monitoring well BH96-2 and upgradient monitoring well BH96-3. Monitoring well BH96-3 was destroyed during the Landfill capping activities in 2016 and was last sampled in 2015. This sampling location has not been replaced. The Fall sampling event was undertaken in September rather than in October-November as stipulated by the Landfill Permit.

2.3 Surface Water Sampling

The surface water monitoring program consisted of water sampling at locations to the northeast and north of the Landfill, as shown in Figure 2. Surface water samples were collected in March (Spring), July (Summer) and September (Fall) 2018, alongside the groundwater samples, by RDKS field staff following established sampling procedures as laid out in the *British Columbia Field Sampling Manual for Continuous Monitoring and the Collection of Air, Air-Emission, Water, Wastewater, Soil, Sediment, and Biological Samples* (BC ENV 2013).

The 2018 surface water sampling was conducted by RDKS field staff in accordance to the *British Columbia Field Sampling Manual (BC ENV 2013)*, as required by the landfill Permit. Prior to any sampling activities, field instruments were calibrated to manufactures specifications in the field. During sampling, a YSI Professional Plus multi-meter was used to collect measurements of in-situ water quality parameters (temperature, electrical conductivity, redox potential, dissolved oxygen, and pH). Field turbidity measurements were obtained using a calibrated LaMotte 2020we field turbidity meter. The field parameter data alongside with analytical results are presented in APPENDIX D.

Surface water samples were collected in clean, laboratory-supplied sample bottles. Water samples were collected by submerging bottles in water and directly filling them. Where submersion of bottles was not possible, due to the addition of preservatives or the need to filter samples, a sealed and disposable syringe was utilized. Water samples for dissolved metals were field-filtered using a 0.45 µm syringe plate filter. As necessary, samples were preserved in the field using chemicals supplied by the laboratory. Standard sampling protocols, as laid out by the *British Columbia Field Sampling Manual* (BC ENV 2013) were followed during surface water sampling to minimize the possibility of cross-contaminating the monitoring wells and the samples.

The surface water samples were submitted to ALS Environmental Ltd for analysis of the following physical parameters, as outlined in Table 4, in accordance of parameters presented in the Permit:

Table 4: Analytical Parameters selected for Surface Water Samples in 2018

Parameter	Season		
	Spring (Mar)	Summer (Jul)	Fall (Sep)
Dissolved metals including mercury	✓	✓	✓
Dissolved Hardness	✓	✓	✓
Total metals including mercury	✓	✓	✓
Total Hardness	✓	✓	✓
Alkalinity	✓	✓	✓
Chloride (Cl)	✓	✓	✓
Fluoride (F)	✓	✓	✓
Sulphate (SO_4)	✓	✓	✓
pH	✓	✓	✓
Conductivity	✓	✓	✓
Total Suspended Solids	✓	✓	✓
Biological Oxygen Demand (BOD)	✓	✓	✓
Chemical Oxygen Demand (COD)	✓	✓	✓
Ammonia (NH_3), Nitrate (NO_3), Nitrite (NO_2), Total Kjeldahl Nitrogen (TKN)	✓	✓	✓
Total Phosphorous	×	✓	✓
Ortho Phosphorous	×	✓	✓

Notes:
Underlined parameters indicate parameters required, in accordance with landfill Permit
× indicates parameter was not analysed
✓ indicates parameter was analysed

Deviations from Landfill Permit requirements

The following samples deviated form the required sampling protocol as follows:

- Samples are required to be sampled in October or November to correspond to Fall conditions. Surface water samples were collected in September.
- Spring (March): Surface water samples were not submitted for Total and Ortho Phosphorous. This omission is assumed to have been caused by an oversight during sampling and the subsequent submission of samples to the laboratory.

2.4 Quality Assurance and Control

To assess and document that the sampling and analytical data are interpretable, meaningful, and reproducible, conformance to the quality assurance / quality control (QA/QC) program laid out in the Landfill Permit was followed. Standard industry field procedures were used in both the collection (field program) and analysis (laboratory) of soil and groundwater samples. The following includes a brief summary of the QA/QC measures implemented by the RDKS field staff during the field program and by Golder during review of the data, as well as QA/QC measures implemented by the laboratory.

Quality Control (QC) measures used in the collection, preservation and shipment of samples included the following:

- Sampling methods were consistent with established field protocols and provincial/federal requirements (BC ENV 2013).
- Field notes were recorded during all stages of the investigation and are available upon request.
- Sample locations were recorded and marked in the field.
- Samples were stored in coolers and chilled with ice packs during transport to the analytical laboratory.
- Samples were transported to the laboratory using laboratory Chain-of-Custody procedures.
- Nitrile gloves were worn when handling sampling equipment and samples and were changed between samples.
- Dedicated Waterra™ tubing and footvalve were used to purge and sample monitoring wells.
- Dedicated syringes and plate filters were used during surface water sample collection.
- Dedicated filters were used to filter sample water for analysis of dissolved metals.

The Quality Assurance (QA) measures established for the field program in accordance with the Landfill Permit included:

- Submission of a field blank sample per each sampling event. A field blank sample is a sample of laboratory grade distilled and deionized water that is used assess potential sources of contamination that may have been introduced to the sample media during sampling (i.e. dusty conditions, sampling error). The field blank consists of the same bottle set and analysis as a regular sample. The blank is filled in the field near the sampling location using laboratory grade deionized and distilled water. The blank is submitted for the same analytical parameters as all other samples.
- Submission of field duplicate samples per each sampling event. A field duplicate sample is a second sample of a certain media (e.g., soil, water) from the same location that is submitted to the analytical lab under a separate label such that the laboratory has no prior knowledge of the corresponding sample.
- The relative percent difference (RPD) between field duplicate sample results was used to assess duplicate sample data. The RPD is a measure of the variability between two outcomes from the same procedure or process and is calculated by:

$$RPD\ (\%) = \left|\left(\frac{(x1 - x2)}{average\ (x1, x2)}\right)\right| x100$$

  where *x*1 is the original sample result and *x*2 is the blind field duplicate result; and

- When the concentration in a sample was less than five times the laboratory reporting limit (LRL), the difference factor (DF) was calculated. The DF is also a measure of the variability between two outcomes from the same procedure or process and is calculated by:

$$DF\ (-) = \left|\left(\frac{(x1 - x2)}{LRL}\right)\right|$$

  where *x*1 is the original sample result, *x*2 is the blind field duplicate result and LRL is the laboratory reporting limit.

In 2009, the BC Ministry of Environment updated the British Columbia Laboratory Manual which contains recommended Data Quality Objectives (DQOs) for laboratories duplicate RPDs (MoE 2009). It is recognized that these DQOs are intended for laboratory duplicates and do not include provisions for additional variability in field duplicates; however, these DQOs are considered a conservative screen for assessing the quality of field duplicates. The DQOs applied to this investigation are as follows:

- Groundwater: An RPD of less than 20% was applied for inorganics and 30% for organics.
- For parameters with concentrations less than five times the LRL, the difference factor should be less than two.

In general, an RPD greater than these targets may reflect “within sample” variability (which reflects the nature of the water chemistry distribution, or variation in the test procedures). In cases where the DQO is greater than the objective, further examination is conducted on a case-by-case basis.

The following criteria were considered acceptable for laboratory QA/QC samples:

- Analytical blanks should be below the detection limits used for the specific analysis.
- Laboratory duplicates should fall within the DQOs set by the laboratory.
- Analytical results for the reference materials or spiked standards should be within the targets specified by the laboratory.

ALS performed the chemical analysis of the groundwater samples for this investigation. ALS has achieved proficiency certification by the Canadian Association for Laboratory Accreditation Inc. (CALA) for the analyses performed. The analytical laboratory also incorporated and reported the results of their internal laboratory checks to the RDKS. These were used to assess the reliability, accuracy and reproducibility of the data. If laboratory QA/QC problems are encountered, the field samples and laboratory QA/QC samples are re-analyzed. Copies of the original laboratory certificates of analysis are provided in APPENDIX D and APPENDIX E.

The results of the QA/QC analysis are presented in Section 3.4.

Deviations from Landfill Permit requirements

During the 2018 QAQC program at the Site generally followed the requirements described in the Landfill Permit; however, the following deviations occurred in the sampling events with respect to duplicate and blank samples:

- Duplicate samples were submitted in July and September only, no duplicate sample was submitted during the March sampling event, and
- Only one trip blank, a pre-filled bottle set prepared by the laboratory, was submitted in July. No blank samples were submitted in March and September.

2.5 Regulatory Framework

In British Columbia, environmental matters pertaining to contaminated sites generally fall under the jurisdiction of the Ministry of Environment & Climate Change Strategy (ENV), pursuant to the Environmental Management Act (EMA, SBC 2003, Chapter 53 assented to 23 October 2003, updated to 10 April 2019). The key regulation under the EMA that relates to the assessment and remediation of contaminated sites is the Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M271/2004, as updated [includes amendments up to BC Reg. 13/2019, 24 January 2019]).

Drinking Water (Current and Future)

ENV Protocol 21 states "*Future drinking water use applies to all drinking water aquifers below a site whether or not current drinking water use applies*." Based on the available hydrogeological information of the underlying saturated geological materials gathered as part of previous investigations at the Sites, part of the underlying saturated geological materials underneath the Landfill would be considered an aquifer as defined in Protocol 21. Therefore, future drinking water use (DW) is considered applicable and the CSR drinking water standards are considered applicable to the Site.

Aquatic Life

The CSR groundwater standards for protection of freshwater aquatic life (AW-F) water bodies are considered applicable to the Site based on the proximity to several nearby creeks.

Livestock Watering

The Site is not used for agricultural purposes and is not located with the ALR; however, four registered water wells are located within 500 m (APPENDIX C). Based on the available information, the potential for local homesteads, and Protocol 21, CSR livestock watering (LW) water use is considered applicable at the Site.

Other Provincial Groundwater Standards Considerations

The CSR iron and manganese DW standards only apply at sites where specified CSR Schedule 2 activities were or are present (as defined in the footnotes of CSR water standards). Based on the former and current land uses of the Site, the CSR DW standards for iron and manganese do not apply to the Site.

Based on Technical Guidance 15 on Contaminated Sites, the quality of groundwater in monitoring well BH96-2 is not required to adhere to the BC Water Quality Guidelines (BC WQG) as this well is located more than 10 m from aquatic receiving environments. The water quality for this well was compared to BC WQG for reference purposes only.

All surface water samples were compared to BC WQG for the protection of aquatic life in freshwater (AW-F) and for reference purposes, were also compared to CSR standards.

3.0 GROUNDWATER AND SURFACE WATER RESULTS

Analytical Results are presented in APPENDIX D, Table D-1 through D-13. Certificates of Analysis for 2018 sampling events are presented in APPENDIX E. Historic analytical results for sampling locations no longer being sampled, as indicated in Section 2.1, Table 1, are presented in APPENDIX F, Table F-1 through F-14.

3.1 Groundwater Flow

Groundwater elevations were measured from the top of casing of BH96-2 and are provided alongside historic groundwater elevations following the installation of the monitoring wells (Table 5: Groundwater Elevations). Given that recent water-level measurements are only available for one groundwater monitoring well, the hydraulic gradient and groundwater flow direction can not be discerned. It may be inferred, based on historical groundwater flow data (SHA 1997) and topography, that groundwater flows to the north.

Table 5: Groundwater Elevations

Monitoring Well	Top of Casing Elevation *mASL*	Depth to Water *mASL (mTOC)*					
		Mar 2018	Jul 2018	Sep 2018	Jun 1996 [1]	Oct 1996 [1]	Jun 1997 [1]
BH96-2	175	-	165.63 (9.37)	165.49 (9.51)	165 (10)	166.3 (8.7)	165.5 (9.5)
BH96-3 (Destroyed)	202	-	-	-	189.1 (12.9)	190.4 (11.6)	190.2 (11.8)

Notes:
1 Indicates groundwater elevation data obtained from SHA (1997), and is provided for reference purposes
mASL = metres above sea level
mTOC = metres below top of casing

Water level elevations measured at BH96-2 in 2018 appear to be similar to the original measurements reported by SHA (1997).

3.2 Groundwater Quality

Based on groundwater flow directions inferred from the SHA (1997) report, there are no monitoring wells within the current groundwater monitoring network that represent upgradient groundwater conditions. The only monitoring well considered upgradient is BH96-3, which was destroyed during the Landfill capping activities. No side gradient monitoring well is available.

Analytical results for the downgradient monitoring well BH96-2 were compared to BC CSR and WQG. Concentrations of all parameters for BH96-2 were less than the BC CSR regulations. Table 6 presents a summary of parameters that were greater than the applicable BC WQG. Concentrations for total aluminum, iron, phosphorous and dissolved cadmium and phosphorous were greater than the applicable guidelines.

Table 6: Groundwater Exceedances of BC WQG

Parameter/Guideline		Total			Dissolved	
		Al	Fe	P	Cd	Phos
BCWQG AW - F (Long-term average)		0.05	-	0.005-0.015	0.00013 - 0.00026	0.005-0.015

Underlined indicates parameter exceeds BC WQG Long Term
Bold and grey highlight indicates parameter exceeds BC WQG Maximum
Red font indicates parameter exceeds BC WQG DW

3.3 Surface Water Quality

Based on the conceptual model of the surface water flow regime presented in Section 1.4 of this report, there are no surface water monitoring locations within the current monitoring network that represent upstream conditions. Surface water location SW-1 is located hydraulically side gradient to the Landfill, and is considered representative of background surface water conditions.

The analytical results for the surface water samples are tabulated and compared against the BC WQG for Freshwater Aquatic Life and Drinking Water. A summary of parameters that were greater than the BC WQG are shown in Table 7 and Table 8.

Table 7: Surface Water Exceedances of CSR

Parameter/Guideline			NH_3	Total	
				Fe	Mn
CSR AW - F			1.3 - 18.5	-	-

Notes:
All concentrations are given in mg/L
BC WQG = BC Water Quality Guidelines
AW – F = Aquatic Life – Freshwater
DW = Drinking Water
- = parameter without guideline
NA = Parameter not analyzed, NH_3 = Ammonia, Al = Aluminum, As = Arsenic, Fe = Iron, Mn = Manganese, Phos = Phosphorous
Underlined indicates parameter exceeds BC WQG Long Term
Bold and grey highlight indicates parameter exceeds BC WQG Maximum
Red font indicates parameter exceeds BC WQG DW
Grey font indicates parameter did not exceeded guidelines, parameter exceeded guideline during separate sampling event

Concentrations were greater than the BC WQG for the following parameters (Table 8)

- Ammonia (SW-3 and SW-21).
- Total aluminum (SW-3, SW-21 and SW-6), arsenic (SW-3), iron (SW-3 and SW-21), manganese (SW-3 and SW-21) and phosphorous (SW-3 and SW-21).
- Dissolved aluminum (SW-6), iron (SW-3 and SW-21), manganese (SW-1, SW-3 and SW-21) and phosphorous (SW-3).

3.4 Results of Quality Assurance/Quality Control Analysis

Field duplicates, which consist of two samples collected from the same sampling location, were collected for surface samples in July and September 2018 to assess variability introduced through sampling and handling procedures. The surface water duplicate samples were collected at surface water station SW-3 (July 2018) and SW-21 (September 2018). Data for the duplicate analyses are presented in APPENDIX D, Table D-13.

The relative percent difference (RPD) and the difference factor (DF) were calculated in APPENDIX D, Table D-13 for both surface water duplicate samples. The RPD is the absolute difference between the two values divided by the mean concentration and should be calculated for concentrations above five times the method detection limit. For samples with concentrations below this threshold, two times the detection limit value is considered the maximum acceptable difference between duplicates.

The surface water duplicate sample at SW-3 indicated the following calculated RPDs above the acceptable limit of 20%:

- Total Suspended Solids – 35% RPD (primary sample concentration 21 mg/L, duplicate sample concentration 14.8 mg/L
- Total Aluminum – 110.5% RPD (primary sample concentration 0.197 mg/L, duplicate sample concentration 0.0568 mg/L)
- Total Iron – 42% RPD (primary sample concentration 1.8 mg/L, duplicate sample concentration 1.18 mg/L)
- Total Zirconium – 56% RPD (primary sample concentration 0.000433 mg/L, duplicate sample concentration 0.000244 mg/L)
- Dissolved Iron – 25% RPD (primary sample concentration 0.062 mg/L, duplicate sample concentration 0.048 mg/L)

The surface water duplicate sample at SW-21 indicated the following calculated RPDs above the acceptable limit of 20%:

- Dissolved Selenium – 22% RPD (primary sample concentration 0.000386 mg/L, duplicate sample concentration 0.000309 mg/L)

The only parameters exceeding the QA/QC limits and the applicable standards are total aluminum and iron in SW-3. These exceeding parameters are likely indicative of sample heterogeneity and total suspended solids in each sample. For the remaining parameters, the results exceeding QA/QC limits are below applicable standards, and higher concentrations were generally reported in the primary sample. Therefore, the results are conservative, and are considered satisfactory for the purpose of this report.

In addition to the field duplicate samples, one trip blank was submitted in September 2018. None of the parameters exceeded the QA/QC criteria. In addition to the field QA/QC samples, internal quality control data provided by ALS was reviewed as a quality assurance of the analytical testing procedures. The laboratory quality control tests consisted of method blanks, replicate samples, and analytical spikes for water analysis, and are provided in the Certificate of Analyses included in APPENDIX E.

All laboratory RPDs were within the acceptable range indicating good reproducibility. The percent recovery for the matrix spike and spiked blank were all within the laboratory's internal QC limits. Similarly, no detections were noted for method blanks, laboratory control samples or standard samples.

The results of the laboratory quality control checks met the laboratory's internal criteria for acceptable results. From the QA/QC information provided, the precision and accuracy of the laboratory data is acceptable.

4.0 DISCUSSION

Several forms of graphical presentation were used to evaluate spatial and temporal water quality variations and are shown on Figures 3 through 5. The data set considered covers 1996 through 2018.

4.1 Leachate Indicator Parameters

Typical parameters generally indicative of landfill leachate are listed below (Tchobanoglous, Theisen, and Vigil 1993):

- Biochemical oxygen demand (BOD)
- Total organic carbon (TOC)
- Chemical oxygen demand (COD)
- Total suspended solids (TSS)
- Ammonia nitrogen
- Nitrate
- Phosphorus (total)
- Alkalinity as $CaCO_3$
- pH
- Total hardness as $CaCO_3$
- Calcium
- Magnesium
- Potassium
- Sodium
- Chloride
- Sulphate
- Total iron

A subset of these parameters was chosen to evaluate the potential environmental impact of the Landfill, based on previous work by SHA (2017) and current analysis of the available data. These parameters are listed below:

- Conductivity (Figure 3-A)
- Ammonia (Figure 3-B)
- Total and Dissolved Iron (Figure 3-C)

- Total and Dissolved Manganese (Figure 3-D)
- Chemical Oxygen Demand (Figure 3-E)
- Chloride (Figure 3-F)
- Sulphate (Figure 3-G)

Concentrations for the above-mentioned parameters were plotted for SW-3, SW-21 and SW-6 in relation to their distance from the Landfill. Background data for each parameter from SW-1 is also provided. Based on the figures, it appears that leachate generated from the Landfill is collected and attenuated quickly past SW-21. A strong decrease in concentrations for all parameters is apparent between SW-3 and SW-21. Parameters at SW-6 are generally similar to, or slightly above, background concentrations.

Conductivity (Figure 3-A), Iron (Figure 3-C) and Chloride (Figure 3-F) are generally greater at SW-6 than background concentrations (SW-1). Other parameters appear to be attenuating to below background concentrations at SW-6.

Time series plots for the following parameters were generated to compare groundwater conditions at BH98-2 to leachate surface water quality at SW-3:

- Conductivity (Figure 4-A)
- Ammonia (Figure 4-B)
- Chloride (Figure 4-C)
- Sulphate (Figure 4-D)
- Total Iron (SW-3 only; Figure 4-E)
- Dissolved Iron (BH96-2 only; Figure 4-F)

In general, the figures indicate that parameters are relatively constant over the available sampling interval. Variations are apparent through the years, indicative of different sampling conditions (i.e. different levels of precipitation, sample handling and sampling procedures). A trendline for each parameter indicates that parameters are relatively constant over time. Sulphate (Figure 4-D) and total iron (Figure 4-E) for SW-3 show a minor increase over time whereas these parameters show a minor decrease over time in BH96-2 (Figure 4-F). Chloride, which is typically a good indicator of Landfill influence given that it is conservative in nature and not subject to attenuation along the groundwater flow path, is increasing in groundwater at BH96-2 and appears to be trending slightly downward for SW-3 (Figure 4-C).

Total Iron, Chloride and Sulphate were plotted against time for the furthest downgradient sampling location SW-6 (Figure 5). Chloride and Sulphate show relatively constant to slightly decreasing trends over time. Only total iron shows a minor increase over time.

4.2 Evaluation of Groundwater and Surface Water Quality

As described above, the overall spatial and temporal analysis suggests that the Landfill-generated leachate is attenuated and does not appear to be significantly impacting surface water quality beyond a distance of approximately 500 m from the Landfill. Concentrations at the downgradient location SW-6 (750 m from the Landfill) appear to be close to background conditions suggesting that Landfill leachate has attenuated enough by the time it reaches the Thornhill Creek water system.

Groundwater from the one downgradient monitoring well at the Site appears to show little impact from leachate generated by the Landfill. All parameters were below the applicable guidelines and regulations with the exception of total aluminum, iron, phosphorous and dissolved cadmium and phosphorous. These parameters may be related to Landfill leachate; however, these parameters could originate from natural sources in the clay unit underlying the majority of the Landfill. Chloride, which is a typical indicator of landfill leachate, is rising in groundwater over time, but is present at relatively low concentrations that are well below regulatory criteria.

The landfill was constructed at the boundary of a glacial gravel deposit with a glaciomarine silt and clay unit. Both units are underlain by a glacial till layer. The groundwater quality of water travelling through the gravel aquifer and the underlying glacial till aquifer could not be assessed due to no monitoring wells available or completed in these units.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The 2018 monitoring program indicates that leachate emanating from the Landfill and migrating at the ground surface appears to be attenuated before it reaches the Thornhill Creek water system. Groundwater quality data is only available for one monitoring well located downgradient of the Landfill. The well is screened in silt and clay, which underlies the majority of the Landfill, and shows little impact of Landfill leachate. Groundwater quality associated with the gravel unit that underlies the south corner of the Landfill could not be assessed due to the lack of monitoring wells in this area. Similarly, the water quality in the glacial till unit which underlies both the gravel unit and the silt and clay unit was also not evaluated due to the lack of available monitoring wells in this unit.

All analytical results obtained in 2018 follow historic trends and confirm previous findings by SHA (2017).

Golder presents the following recommendation for future work at the Thornhill Landfill, assuming the environmental monitoring at the closed Thornhill Landfill will continue as per the current Operation Certificate:

- The Landfill permit requires that the Permittee engage a qualified professional, experienced in hydrogeology, to design a groundwater monitoring program, and that two monitoring well locations should be sampled in the interim. It is recommended that this groundwater monitoring program be developed. It is anticipated that the program would include the installation of one to three additional monitoring wells to adequately establish groundwater quality and flow direction in all three stratigraphic units (silt and clay, gravel and glacial till units).
- Should new monitoring wells be installed, Golder recommends that a qualified surveying company be hired to obtain ground and top of casing elevations of all monitoring wells to accurately assess groundwater elevations and flow.

6.0 CLOSING COMMENTS

We trust that this report provides the information required at this time. If you have any questions, please feel free to contact the undersigned.

APPENDIX A

Landfill Permit

BRITISH COLUMBIA

Date: June 20, 2014

Authorization Number: MR-4057

REGISTERED MAIL

Regional District of Kitimat-Stikine
Suite 300 – 4545 Lazelle Avenue
Terrace, BC
V8G 4E1

Dear Operational Certificate Holder:

Enclosed is Operational Certificate MR-4057 issued under the provisions of the *Environmental Management Act*. Your attention is respectfully directed to the terms and conditions outlined in the operational certificate.

This operational certificate does not authorize entry upon, crossing over, or use for any purpose of private or Crown lands or works, unless and except as authorized by the owner of such lands or works. The responsibility for obtaining such authority rests with the operational certificate holder. It is also the responsibility of the operational certificate holder to ensure that all activities conducted under this authorization are carried out with regard to the rights of third parties, and comply with other applicable legislation that may be in force.

This decision may be appealed to the Environmental Appeal Board in accordance with Part 8 of the *Environmental Management Act*. An appeal must be delivered within 30 days from the date that notice of this decision is given. For further information, please contact the Environmental Appeal Board at (250) 387-3464.

Ministry of Environment
Environmental Protection Division
Bag 5000
Smithers, BC V0J 2N0
Skeena Region
Telephone: (250) 847-7260
Facsimile: (250) 847-7591

Administration of this operational certificate will be carried out by staff from the Skeena Region. Plans, data and reports pertinent to the operational certificate are to be submitted to the Regional Director, Environmental Protection, at Ministry of Environment, Regional Operations, Skeena Region, Bag 5000, Smithers, BC V0J 2N0.

Yours truly,

M. Love

Mark Love
for Director, *Environmental Management Act*
Skeena Region

Enclosure

cc: Environment Canada

MINISTRY OF ENVIRONMENT

OPERATIONAL CERTIFICATE

MR-4057

for the

THORNHILL LANDFILL

Under the Provisions of the Environmental Management Act and in accordance with the approved Regional District of Kitimat-Stikine Solid Waste Management Plan, the

Regional District of Kitimat Stikine

300-4545 Lazelle Avenue

Terrace, British Columbia

V8G 4E1

is authorized to store, handle, treat and discharge municipal solid waste from Thornhill and surrounding areas at the Thornhill landfill subject to the conditions listed below. Contravention of any of these conditions is a violation of the *Environmental Management Act* and may result in prosecution.

1. LOCATION OF LANDFILL PROPERTY

The location of the property where discharges are authorized to occur is described in Land and Water BC License No. 634224 as follows: that part of District Lot 518 and parts of Blocks B and C of District Lot 655, Plan 1304, all of Range 5, Coast District more particularly described as follows:

Commencing at a point 20 metres North and 20 metres East of the Northwest corner of Block C of District lot 518, thence 225 metres North, thence 600 metres West to highway right of way; thence 700 metres Southeast along North side of highway to the point of commencement.

2. DESIGN, OPERATIONS and CLOSURE PLAN

The landfill and associated works shall be designed by qualified professionals [such as engineer(s) and/or geoscientist(s)] registered in the Province of British Columbia who have expertise in the field of landfill design. These details shall be incorporated into a "Design, Operations, and Closure Plan" (DOCP) and submitted to the Director for review

M Love

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Date Issued: June 20, 2014
Date Amended:
(most recent)

and approval prior to June 30, 2015. The predominant focus of the DOCP shall be on closure aspects, given the intentions to close the landfill in the near future. The landfill shall be operated and closed in accordance with the approved DOCP.

The DOCP shall include the following components:

1. Design and Operations (active landfill remaining life)

    - extent and location of each disposal area, clearly shown on a site plan;
    - quantities of wastes (solid and leachate) discharged annually;
    - works associated with each disposal area;
    - scaled site plan accurately showing legal survey, engineered final design footprint, and final design contours;
    - proposed litter control measures;
    - if applicable, proposed measures to meet the Landfill Gas Regulation and landfill gas health and safety requirements;
    - final lift height of compacted waste;
    - engineered final design footprint delineating the maximum extent of solid waste disposal allowable at the facility horizontally and vertically;
    - groundwater model developed by a qualified professional (experienced in groundwater hydrogeology) that:

        (i) outlines the inferred groundwater flow direction, rate, and shape of leachate plume, etc. beneath and around the landfill as influenced by landfill leachate;

        (ii) appropriately assesses the correct number and location of groundwater wells;

        (iii) estimates the loadings of Potential Contaminants of Concern (PCOC)'s from landfill leachate to the environment.

2. Leachate Management

    - proposed leachate management plan;

M. Love

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Date Issued: June 20, 2014
Date Amended:
(most recent)

- proposed leachate system design including an assessment of the effectiveness of the current collection system and recommendations for improvements;
- proposed leachate treatment

3. Closure

- proposed method, coverage (area) and timing of progressive closure;
- final maximum allowable slopes;
- proposed closure plan including:

i) intended end-use of the landfill property after closure;

ii) anticipated final total waste volume and tonnage in place;

iii) a topographic plan showing the final elevation contours of the landfill and surface water diversion and drainage controls;

iv) design of the final cover suited to the intended end-use of the site, including the thickness and permeability of barrier layers and drainage layers, and information on topsoil, vegetative cover and erosion prevention controls;

v) a comprehensive long term monitoring plan including groundwater monitoring, surface water monitoring, landfill gas monitoring (if necessary), leachate monitoring, final cover monitoring, and erosion and settlement monitoring, for a minimum post-closure period of 25 years;

vi) design, if necessary, for the collection, storage and treatment/use of landfill gas for a minimum 25 year post-closure period

vii) plan for the operation of any required pollution abatement engineering works such as leachate collection and treatment systems, for a minimum post-closure period of 25 years; and

viii) an estimated cost to carry out closure and post-closure activities for a minimum period of 25 years.

M. Love

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Date Issued: June 20, 2014
Date Amended:
(most recent)

3. DISCHARGE OF MUNICIPAL SOLID WASTE

Municipal solid waste is authorized to be discharged to ground in accordance with the DOCP. The site reference number for this discharge is E208844. The authorization to discharge municipal solid waste will cease upon the commissioning of the Forceman Ridge landfill.

4. STORAGE AND HANDLING OF WASTES FOR SALVAGE AND RECYCLING

Wastes are authorized to be stored and handled for salvage and recycling in accordance with the DOCP.

5. DISCHARGE OF AIR CONTAMINANTS FROM OPEN BURNING OF WOOD RESIDUE

Air contaminants are authorized to be released from the open burning of wood residue in accordance with this section and the DOCP. The site reference number for this discharge is E216685.

5.1 Location

Any open burning of selected wastes shall be restricted to the designated open burning area as shown on the attached site plan and as identified on-site. Signs which identify the nature of the waste acceptable at the designated open burning area shall be erected and maintained.

5.2 Quantity, Timing, and Duration of Discharge

The maximum authorized quantity of wood residue to be open burned during each event is that which has accumulated at the time of burn initiation.

The maximum authorized duration of each burn shall be limited to the period between two hours after sunrise on the day of ignition, and sunset on the following day. Each open burn shall be completely extinguished at the end of the authorized burn duration.

Should a condition arise which prevents the burn pile(s) from being burned within this period, the Director shall be notified in accordance with this authorization.

5.3 Nature of Wastes

Acceptable materials for burning may only include dry, unpainted, untreated demolition, construction and packing-related wood residue, clean stumps and brush, but shall exclude nuisance-causing combustibles such as glue-containing

wood, painted and treated wood, sawdust, yard wastes, mulch, wood chips, rubber, plastics, tars, insulation, roofing material, asphalt shingles, etc.

5.4 Favourable Weather for Smoke Dispersion

Open burning shall not proceed unless the recorded Environment Canada Ventilation Index Forecast for Terrace is good for the first day and good or fair for the second day.

The contact number for the forecast is 1-888-281-2992. Ventilation index forecasts can also be obtained after 7:00 a.m. from the following Environment Canada website: http://www.env.gov.bc.ca/epd/epdpa/venting/venting.html

A burn registration number shall be obtained from the Ministry of Forests (1-888-797-1717) prior to ignition.

Open burning of wood residue shall not be initiated or continued if the local air flow will cause the smoke to negatively impact a nearby population or cause pollution. No burning shall occur during periods of fire hazard or when burning is prohibited by other agencies.

5.5 Minimization of Smoke

Each burn shall be tended in a manner that ensures minimization of smoke emissions. Measures to minimize smoke shall include, but not necessarily be limited to: stacking of waste in a manner that eliminates inclusion of dirt; waiting to burn until wastes are reasonably dry after any significant precipitation event; and using adequate equipment and staff.

5.6 Extinguishment Contingency Plan

Prior to burning, a contingency plan shall be in place detailing how the open burn will be extinguished in the event of any of the following occurring:

i) Inadequate smoke dispersion in the surrounding environment;

ii) wood continues to smoulder after the authorized burn period; and,

iii) the Director requires that the open burn be extinguished for environmental protection reasons

5.7 Extinguishment

All combustion shall be completely extinguished at the end of the authorized period as set out in Section 5.2

M. Love

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Date Issued: June 20, 2014
Date Amended:
(most recent)

6. GENERAL REQUIREMENTS

6.1. Prohibited Wastes

No wastes as defined by the Hazardous Waste Regulation shall be treated or disposed of at this site except as authorized by the Director.

6.2. Waste Asbestos

Notwithstanding Section 6.1 of this operational certificate, the disposal of waste asbestos under Section 3 of this operational certificate and in compliance with the requirements of Section 40 of the Hazardous Waste Regulation is hereby authorized.

6.3. Contaminated Soil

Soil that contains contaminants in concentrations less than "Hazardous Waste" as defined by the Hazardous Waste Regulation may be disposed at the landfill site. Disposal shall not include use as final cover material.

6.4. Waste Measurement

The quantity of waste material landfilled at the site shall be measured or estimated on an annual basis. This data shall be made available for inspection upon request.

6.5 Groundwater and Surface Water Quality

The landfill must be operated and maintained so that the applicable groundwater or surface water use is not compromised beyond the landfill site boundary, or 150 metres from the landfill footprint, whichever is closer. Any surface water quality must also meet standards for applicable water use(s). The applicable water use is determined on the basis of existing land use and possible future uses for one or more of aquatic life, irrigation, livestock or drinking water. Protocols and/or guidance under the *Environmental Management Act* Part 4 (Contaminated Site Remediation) shall be followed by a qualified professional in determining the applicable water use (i.e. Contaminated Sites Regulation Section 12; Technical Guidance 6 on Contaminated Sites; etc.).

The director may specify other numerical water quality standards and objectives that the operator of the landfill facility must meet.

6.5.1 Consequence of Exceedance

Where monitoring shows contaminant concentrations exceed the applicable water use, or other standards, the operator shall notify the Director and take one of the following corrective actions:

- Mitigation to meet standards or
- Based on the results of a risk assessment carried out in accordance with Contaminated Sites Regulation guidance (i.e. Technical Guidance 7), undertake the warranted mitigation measures to achieve acceptable risk.

7.6 Electric Fencing

7.6.1 Design, Construction and Maintenance

Wherever required, electric fencing and gate systems at the landfill shall be designed, constructed, and maintained such that bears are prevented from entering into the landfill through any portion of the fence or gates at any time of the day. The electric fence shall be operational for at least 2 years beyond the date of last putrescible waste acceptance.

7.6.2 Fence Type

Fencing may be either high tensile smooth wire or fence fabric (e.g., mesh-wire, page-wire, chainlink or the like). The configuration of a high tensile smooth wire fence shall consist of a minimum of eight strands, with four energized strands alternating with four grounded strands as follows: the bottom strand shall be a grounded (-) strand and shall not be more than 10 cm from the earth at any location; and thence starting from the bottom strand, the other seven strands shall be spaced 15 ± 2 cm, 15 ± 2 cm, 15 ± 2 cm, 20 ± 2 cm, 20 ± 2 cm, 20 ± 2 cm, and 25 ± 2 cm. Additional strands to this minimum configuration may be used.

A fence fabric may be used instead of high tensile smooth wire. The fence fabric shall: be a minimum of 1.22 metre high; be constructed of a minimum wire thickness of 11 gauge, and have a maximum mesh size of 15 cm. The bottom of the fabric shall not be more than 10 cm from the earth at any location. Any uncharged fence fabric shall have a minimum of four strands of charged wires on an outrigger system, spaced as follows: the first strand shall not be higher than 25 cm from the earth; and each of the remaining three strands shall be spaced approximately 25 cm apart from adjacent charged strands.

7.6.3 Wire Tension

For a high tensile smooth wire fence construction, all strands shall be tightened to a minimum of 125 lbs tension at 20°C. The required tension is to be corrected for temperature by use of the following formula for 12-½ gauge high tensile steel wire:

$$Tension = 125 - 2.5(Temperature - 20)$$

where: *Tension* is in lbs force

Temperature is in °C

7.6.4 Post Spacing

Fence posts shall be spaced a maximum of 7.5 metres apart.

7.6.5 Grounding System

A grounding system shall be installed consisting of solid grounding rods (i.e., not pipe) with a minimum diameter of 16 mm (5/8 inch) that have a buried length of at least 2 metres. A minimum of three grounding rods (spaced at least 3 metres apart) shall be installed and connected to the energizer. Alternative energizer grounding systems (e.g., grounding plates, or a deep-driven grounding system) may be used provided the grounding is equivalent to or better than three grounding rods. A grounding rod (or equivalent) shall be installed at least once every 450 metres along the fence and connected to the grounded wire strands or uncharged fence fabric. Additional grounding may be required for dry sites or if other conditions affect proper grounding.

7.6.6 Period of Operation

Electric fencing shall be fully operational during the period of April 1 to October 31 inclusive each year and at any other time of year when there is bear activity in the immediate surrounding area. If snow is present during this period, any electrified strands above the snow line shall be isolated from the remainder of the system and energized.

7.6.7 Minimum Voltage

Electric fencing shall be operated with a minimum voltage of 6,000 volts.

7.6.8 Gate(s)

Any access through electric fencing for vehicles, equipment and personnel shall consist of an electrified gate system that is closed during non-operating hours. The gate system shall be electrified to a minimum voltage of 6,000

volts at all times except when being opened or closed. Any gate that is open during operating hours shall be periodically checked by the attendant for bear activity during hours of operation. Gaps between the gate and the fence and the earth, and between gate panels (for a double-hung gate), shall not exceed 10 cm.

7.6.9 Fence Inspections

The perimeter of the electric fencing shall be inspected on every day that the site is open to the public and the voltage of the fencing measured at several points and at each gate using a proper electric fence voltmeter. Post landfill closure, fence inspections may be reduced to once every two weeks. The results of voltage testing shall be recorded in a log book. Any results less than the minimum 6,000 volts shall be immediately investigated for the cause of the low voltage (e.g., low battery, litter, vegetation, loose or crossed wires, broken insulators, breaks in the grounding system, etc.). Corrective actions to restore proper voltage shall be immediately undertaken.

Any penetrations through electric fencing by bears shall be immediately reported to the Conservation Officer Service at 1-877-952-7277 and to the Director at 1-250-847-7260.

In cases of low voltage or signs of penetration attempts, inspections shall be increased from once per week to once per day until proper voltage is fully restored and until there are no new signs of penetration attempts, respectively.

7.7 Dead Animal Disposal

Dead animals and animal parts shall be disposed of in the solid waste disposal area and covered as soon as practicable with a minimum of 60 centimetres of soil and/or waste material such that flies and scavenging animals are prevented from accessing the carrion. Disposal of Specified Risk Material from cattle shall only be done in accordance with Canadian Food Inspection Agency requirements and procedures.

8. ENVIRONMENTAL EFFECTS MONITORING

The Permittee shall undertake Environmental Effects Monitoring (EEM) to determine the effects of the landfill on the receiving environment, both during operation and post closure. EEM studies may include surface water, biological and sediment components and shall be performed using documented and validated methods, and their results interpreted and reported on in accordance with generally accepted standards of good scientific practice. The Permittee shall submit the results of the studies, including analysis and interpretation, to the Director, by June 30 of each following year.

Date Issued: June 20, 2014
Date Amended:
(most recent)

Mark Love, P.Ag.
For Director, *Environmental Management Act*

8.1 Surface Water Monitoring

The following surface water monitoring program shall be carried out:

Locations	Parameters	Frequency
SW-1 Thornhill Creek upstream E231882 SW-3 Leachate seepage E231883 SW-6 Thornhill Creek downstream E231884 SW-21 Leachate Weir E231886	Inorganics Dissolved metals, total metals, alkalinity (as $CaCO_3$), total and dissolved hardness (as $CaCO_3$), ammonia, fluoride, chloride, conductivity, nitrate, nitrite, total kjeldahl nitrogen, pH, total phosphorus, ortho-phosphorus, total suspended solids, sulphate. Organics Biological oxygen demand (BOD_5), chemical oxygen demand (COD) Field Parameters Conductivity, pH, temperature, dissolved oxygen, turbidity	Once per Season: Spring (March- April) Summer(July –August) Fall (October – Nov.)

8.2. Groundwater Monitoring

For the purpose of supporting groundwater modeling and to detect any significant impacts on the environment from leachate in the groundwater, the Permittee shall engage a qualified professional, experienced in groundwater hydrogeology, to design a groundwater monitoring program. The groundwater monitoring program shall be submitted for the written approval by the Director on or before June 30, 2015, and shall be implemented by September 30, 2015 (implementation shall be considered to include installation of any additional wells specified in the final groundwater monitoring program design). The Director may specify, from time to time, that the groundwater monitoring program be revised and updated for his/her written approval. The program shall consider the use of existing and if necessary, new groundwater wells.

In the interim, the following groundwater monitoring program shall be carried out:

Locations	Parameters	Frequency
BH 96-2 E231889 HB 96-3 E231890	Inorganics Dissolved metals, total metals, alkalinity (as $CaCO_3$), dissolved hardness (as $CaCO_3$), ammonia, chloride, fluoride, conductivity, nitrate, nitrite, total kjeldahl nitrogen, pH, total phosphorus, total dissolved solids, sulphate. Organics Chemical oxygen demand (COD), Field Parameters Conductivity, pH, water elevation, temperature, dissolved oxygen	Once per Season: Spring (March- April) Summer(July –August) Fall (October – Nov.)

Date Issued: June 20, 2014
Date Amended:
(most recent)

Mark Love, P.Ag.
For Director, *Environmental Management Act*

8.3 Ground and Surface Water Monitoring Procedures

8.3.1 Sampling

Sampling is to be carried out in accordance with the procedures described in the most recent edition of the "British Columbia Field Sampling Manual for Continuous Monitoring and the Collection of Air, Air-Emission, Water, Wastewater, Soil, Sediment, and Biological Samples", or by suitable alternative procedures as authorized by the Director.

A copy of the above manual may be purchased from the Queen's Printer Publications Centre, P.O. Box 9452, Stn. Prov. Gov't. Victoria, British Columbia, V8W 9V7 (1-800-663-6105 or (250) 387-6409). A copy of the manual is also available for inspection at all Environmental Protection offices.

8.3.2 Analyses

Analyses are to be carried out in accordance with procedures described in the most recent edition of the "British Columbia Environmental Laboratory Methods Manual for the Analysis of Water, Wastewater, Sediment, Biological Materials and Discrete Ambient Air Samples", or by suitable alternative procedures as authorized by the Director.

A copy of the above manual may be purchased from the Queen's Printer Publications Centre, P.O. Box 9452, Stn. Prov. Gov't. Victoria, British Columbia, V8W 9V7 (1-800-663-6105 or (250) 387-6409). A copy of the manual is also available for inspection at all Environmental Protection offices.

8.3.3 Quality Assurance/Quality Control (QA/QC)

The operational certificate holder is required to conduct the following Quality Assurance and Control Program to determine the acceptability of data required by this permit and Section 2(d) of the Environmental Data Quality Assurance Regulation.

a) Obtain and keep current, the laboratory precision, accuracy and blank quality control criteria for each laboratory analysed parameter from the analytical laboratory(ies).

b) Collect one duplicate sample during each sampling session from one of the discharge points.

c) Each duplicate sample shall be submitted to the laboratory; one of the pair identified as the regular sample, and the other, as a blind sample identified

by a fictitious site-name established solely to identify the duplicate sample.

d) For each parameter, report the results of the field duplicates in terms of the degree of variation as the relative percent difference.

e) A sample collection blank shall be prepared, containing distilled water, and preservative if required, and submitted as a blank sample with one sample set per session. If any result for any parameter indicates detectable concentrations, then efforts shall be made to determine and control the source of contamination.

9. REPORTING REQUIREMENTS

9.1. Reporting

Reports, drawings, data, studies and the like that are specified in this operational certificate shall be submitted in hardcopy and electronic formats unless otherwise specified by the Director.

9.2. Non-compliance Reporting

The Director shall be immediately notified of any non-compliance with the requirements of this operational certificate and take appropriate remedial action. Written confirmation of all non-compliance events, including available test results, is required by facsimile or email to Environmental Protection Staff within 24 hours of the original notification unless otherwise directed by the Director.

9.3. Non-compliance Follow-up

Upon request, the operational certificate holder shall submit to the Director a written report within 30 days of the non-compliance occurrence. The report shall include, but not necessarily be limited to, the following:

i) All relevant information and test results related to the non-compliance;

ii) an explanation of the most probable cause(s) of the non-compliance; and,

iii) remedial action planned and/or taken to prevent similar non-compliance(s) in the future.

9.4. Annual Report

An annual report shall be submitted to the Director on or before June 30 each year for the previous calendar year.

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Date Issued: June 20, 2014
Date Amended:
(most recent)

The annual report shall contain at a minimum:

i) the type and tonnage or volume of waste received, recycled, and landfilled for the year;

ii) occurrences or observations of wildlife attempting to access the facility; and,

iii) the results of any monitoring programs undertaken by the operational certificate holder for this site. Trend analysis, as well as an evaluation of any identified impacts of the discharges on the receiving environment in the previous year shall be carried out by a qualified professional, if determined to be necessary by the Director.

10 CLOSURE REQUIREMENTS

10.1 Notification of Closure

The Permittee shall notify the Director in writing of intentions to close the landfill site.

10.2 Closure Plan

An updated closure plan shall be submitted to the Director upon request. The closure plan shall, at a minimum, include the following:

i) Proposed end-use of the landfill property after closure;

ii) anticipated total waste volume, tonnage, and life remaining of the landfill;

iii) a topographic plan showing the final elevation contours of the landfill and surface water diversion and drainage controls;

iv) design of the final cover suited to the intended end-use of the site, including the thickness and permeability of barrier layers and drainage layers, and information on topsoil, vegetative cover and erosion prevention controls;

v) procedures for notifying the public about the closure and about alternative waste disposal facilities;

vi) rodent and nuisance wildlife control procedures;

vii) a comprehensive monitoring plan if determined to be necessary by a qualified professional, including groundwater monitoring, surface water monitoring, landfill gas monitoring, leachate monitoring, final cover monitoring, and erosion and settlement monitoring, for a minimum post-closure period of 25 years;

viii) a plan and accompanying design for the collection, storage and treatment/use of landfill gas for a minimum 25 year post-closure period (if required;

ix) a plan for operation of any required pollution abatement engineering works such as leachate collection and treatment systems, for a minimum post-closure period of 25 years; and

x) an estimated cost, updated annually, to carry out closure and post-closure activities for a minimum period of 25 years.

10.3 Closure Funding

The Permittee shall ensure that sufficient funds will be available to provide for all closure and post-closure requirements as outlined in the closure plan required by Section 9.2, plus a reasonable contingency for any remediation which may be required.

10.4 Final Cover

The final cover system shall be designed by a qualified professional to match the intended end-use of the landfill site and to match the needs of any required environmental management systems (leachate minimization or recirculation, as the case may be, landfill gas collection and treatment, etc.). Generally, the final cover shall consist of a layer of 1 metre of low permeability ($<1 \times 10^{-5}$ cm/s) compacted soil followed by a layer of topsoil suitable for establishment of vegetation. Use of higher permeability soil must first be approved by the Director. The final cover shall be constructed with minimum and maximum slopes as specified by a qualified professional (see Section 2) to promote runoff and minimize erosion, with appropriate runon/runoff drainage controls, erosion controls, and gas venting controls. The site shall be seeded with a grass/legume mixture suited to the local climate.

10.5 Progressive Application of Final Cover

Completed portions of the landfill shall progressively receive final cover during the active life of the landfill. The maximum area of disposed refuse that has not yet received final cover shall not exceed 25% of the total final footprint area.

M. Love

Mark Love, P.Ag.
For Director, *Environmental Management Act*

Final cover is to be applied according to the specifications identified in Section 9.4.

11. ENVIRONMENTAL IMPACT

Inspections of the discharge will be carried out by Environmental Protection personnel as a part of the routine operational certificate inspection procedure. Based on these inspections and any other information available to the Director on the effect of the discharge on the receiving environment, the operational certificate holder may be required to undertake additional monitoring, undertake additional studies, install additional pollution control works, or change the method of operation.

NOTES

BC CSR AW-F	ter Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW	tion Water Quality Guidelines for Protection of Livestock
BC CSR DW	ulation Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BcWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.

British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG), updated from time to time, for the protection of freshwater aquatic life (AW-F).
H = standard is hardness dependent; pH = standard is pH dependent; CI = standard is chloride dependent; T = standard varies with temperature
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QA/QC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)
QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)
QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BCWQG AWF Long-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW — BC Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG).
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — ion Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG), updated
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with temperature
V = Standard is valence dependent.VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QA/QC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

Table D-11: Surface Water Analytical Results
2018 Thornhill Transfer Station Annual Monitoring Program

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BC CSR AW-F — er Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — on Water Quality Guidelines for Protection of Livestock
BC CSR DW — ulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

Notes:
QA/QC = quality assurance/quality control; FDA = field duplicate available; FD = field duplicate
Laboratory Reporting Limit indicates the minimum concentration that could be measured by laboratory instrumentation for a specific sample.
Mean indicates the mean or average value calculated of a field duplicate pair (the FDA and the FD).
Relative Percent Difference (RPD) is calculated when the mean value is greater than five times the laboratory reporting limit.
Difference Factor (DF) is calculated when the mean value is less than five times the laboratory reporting limit.
NC = not calculated; NA = Not Applicable
80% Indicates the parameter analyzed exceeds Golder's internal QA/QC targets.

APPENDIX E

2018 Certificates of Analysis

REGIONAL DISTRICT OF KITIMAT-STIKINE

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Aluminum (Al)-Dissolved	DUP-H	L2070518-1
Method Blank	Silver (Ag)-Total	MB-LOR	L2070518-1
Method Blank	Sulfur (S)-Total	MB-LOR	L2070518-1
Matrix Spike	Barium (Ba)-Dissolved	MS-B	L2070518-1
Matrix Spike	Calcium (Ca)-Dissolved	MS-B	L2070518-1
Matrix Spike	Magnesium (Mg)-Dissolved	MS-B	L2070518-1
Matrix Spike	Strontium (Sr)-Dissolved	MS-B	L2070518-1
Matrix Spike	Barium (Ba)-Total	MS-B	L2070518-1
Matrix Spike	Calcium (Ca)-Total	MS-B	L2070518-1
Matrix Spike	Magnesium (Mg)-Total	MS-B	L2070518-1
Matrix Spike	Potassium (K)-Total	MS-B	L2070518-1
Matrix Spike	Sodium (Na)-Total	MS-B	L2070518-1
Matrix Spike	Strontium (Sr)-Total	MS-B	L2070518-1

Qualifiers for Individual Parameters Listed:

Qualifier	Description
DUP-H	Duplicate results outside ALS DQO, due to sample heterogeneity.
MB-LOR	Method Blank exceeds ALS DQO. Limits of Reporting have been adjusted for samples with positive hits below 5x blank level.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-TITR-VA	Water	Alkalinity Species by Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

BR-L-IC-N-VA	Water	Bromide in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

CL-IC-N-VA	Water	Chloride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-COL-VA	Water	Chemical Oxygen Demand by Colorimetric	APHA 5220 D. CHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

EC-SCREEN-VA	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

F-IC-N-VA	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

HG-D-CVAA-VA	Water	Diss. Mercury in Water by CVAAS or CVAFS	APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

HG-T-CVAA-VA	Water	Total Mercury in Water by CVAAS or CVAFS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

MET-D-CCMS-VA	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Reference Information

MET-T-CCMS-VA	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

NH3-F-VA	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-L-IC-N-VA	Water	Nitrite in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-L-IC-N-VA	Water	Nitrate in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SO4-IC-N-VA	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

TDS-VA	Water	Total Dissolved Solids by Gravimetric	APHA 2540 C - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-F-VA	Water	TKN in Water by Fluorescence	APHA 4500-NORG D.

This analysis is carried out using procedures adapted from APHA Method 4500-Norg D. "Block Digestion and Flow Injection Analysis". Total Kjeldahl Nitrogen is determined using block digestion followed by Flow-injection analysis with fluorescence detection.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius. Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA

Chain of Custody Numbers:

10-334387

GLOSSARY OF REPORT TERMS

Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.
mg/kg - milligrams per kilogram based on dry weight of sample.
mg/kg wwt - milligrams per kilogram based on wet weight of sample.
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.
mg/L - milligrams per litre.
< - Less than.
D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
MB-LOR	Method Blank exceeds ALS DQO. Limits of Reporting have been adjusted for samples with positive hits below 5x blank level.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

Qualifiers for Sample Submission Listed:

Qualifier	Description
WSMT	Water sample(s) for total mercury analysis was not submitted in glass or PTFE container with HCl preservative. Results may be biased low.

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Laboratory Control Sample	Magnesium (Mg)-Dissolved	MES	L2070515-1, -2, -3, -4
Matrix Spike	Barium (Ba)-Dissolved	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Calcium (Ca)-Dissolved	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Magnesium (Mg)-Dissolved	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Sodium (Na)-Dissolved	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Strontium (Sr)-Dissolved	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Barium (Ba)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Calcium (Ca)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Iron (Fe)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Magnesium (Mg)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Manganese (Mn)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Potassium (K)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Silicon (Si)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Sodium (Na)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Strontium (Sr)-Total	MS-B	L2070515-1, -2, -3, -4
Matrix Spike	Sulfur (S)-Total	MS-B	L2070515-1, -2, -3, -4

Qualifiers for Individual Parameters Listed:

Qualifier	Description
DLAI	Detection limit raised due to low level analytical interference or background.
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
MES	Data Quality Objective was marginally exceeded (by < 10% absolute) for < 10% of analytes in a Multi-Element Scan / Multi-Parameter Scan (considered acceptable as per OMOE & CCME).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-TITR-VA	Water	Alkalinity Species by Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

BOD5-VA	Water	Biochemical Oxygen Demand- 5 day	APHA 5210 B- BIOCHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5210 B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

BR-L-IC-N-VA	Water	Bromide in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

CL-IC-N-VA	Water	Chloride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-COL-VA	Water	Chemical Oxygen Demand by Colorimetric	APHA 5220 D. CHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

EC-SCREEN-VA	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

Reference Information

F-IC-N-VA	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

HG-D-CVAA-VA	Water	Diss. Mercury in Water by CVAAS or CVAFS	APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

HG-T-CVAA-VA	Water	Total Mercury in Water by CVAAS or CVAFS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

MET-D-CCMS-VA	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

MET-T-CCMS-VA	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

NH3-F-VA	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-L-IC-N-VA	Water	Nitrite in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-L-IC-N-VA	Water	Nitrate in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

SO4-IC-N-VA	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

TKN-F-VA	Water	TKN in Water by Fluorescence	APHA 4500-NORG D.

This analysis is carried out using procedures adapted from APHA Method 4500-Norg D. "Block Digestion and Flow Injection Analysis". Total Kjeldahl Nitrogen is determined using block digestion followed by Flow-injection analysis with fluorescence detection.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius. Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA

Chain of Custody Numbers:

15-588263

Reference Information

GLOSSARY OF REPORT TERMS

Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.
mg/kg - milligrams per kilogram based on dry weight of sample.
mg/kg wwt - milligrams per kilogram based on wet weight of sample.
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.
mg/L - milligrams per litre.
< - Less than.
D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
MES	Data Quality Objective was marginally exceeded (by < 10% absolute) for < 10% of analytes in a Multi-Element Scan / Multi-Parameter Scan (considered acceptable as per OMOE & CCME).
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2070515 were received on 21-MAR-18 11:20.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Laboratory Control Sample	BOD	LCS-ND	L2124909-1, -2, -3, -4, -5, -6
Matrix Spike	Barium (Ba)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Boron (B)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Calcium (Ca)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Magnesium (Mg)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Manganese (Mn)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Potassium (K)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Sodium (Na)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Strontium (Sr)-Dissolved	MS-B	L2124909-1, -2, -3, -4, -5, -6, -8
Matrix Spike	Aluminum (Al)-Total	MS-B	L2124909-8
Matrix Spike	Barium (Ba)-Total	MS-B	L2124909-1, -2, -3, -4, -5, -6
Matrix Spike	Calcium (Ca)-Total	MS-B	L2124909-1, -2, -3, -4, -5, -6
Matrix Spike	Strontium (Sr)-Total	MS-B	L2124909-1, -2, -3, -4, -5, -6
Matrix Spike	Ammonia, Total (as N)	MS-B	L2124909-2, -6

Qualifiers for Individual Parameters Listed:

Qualifier	Description
DLAI	Detection limit raised due to low level analytical interference or background.
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
DTMF	Dissolved concentration exceeds total for field-filtered metals sample. Metallic contaminants may have been introduced to dissolved sample during field filtration.
LCS-ND	Lab Control Sample recovery was slightly outside ALS DQO. Reported non-detect results for associated samples were unaffected.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-TITR-VA	Water	Alkalinity Species by Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

BOD5-VA	Water	Biochemical Oxygen Demand- 5 day	APHA 5210 B- BIOCHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5210 B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

BR-L-IC-N-VA	Water	Bromide in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

CL-IC-N-VA	Water	Chloride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-COL-VA	Water	Chemical Oxygen Demand by Colorimetric	APHA 5220 D. CHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

EC-SCREEN-VA	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

F-IC-N-VA	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

Reference Information

HG-D-CVAA-VA	Water	Diss. Mercury in Water by CVAAS or CVAFS	APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

HG-T-CVAA-VA	Water	Total Mercury in Water by CVAAS or CVAFS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

MET-D-CCMS-VA	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

MET-T-CCMS-VA	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

NH3-F-VA	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-L-IC-N-VA	Water	Nitrite in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-L-IC-N-VA	Water	Nitrate in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-PRES-COL-VA	Water	Total P in Water by Colour	APHA 4500-P Phosphorus

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is determined colourimetrically after persulphate digestion of the sample.
Samples with very high dissolved solids (i.e. seawaters, brackish waters) may produce a negative bias by this method. Alternate methods are available for these types of samples.

Arsenic (5+), at elevated levels, is a positive interference on colourimetric phosphate analysis.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

PO4-DO-COL-VA	Water	Diss. Orthophosphate in Water by Colour	APHA 4500-P Phosphorus

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.
Samples with very high dissolved solids (i.e. seawaters, brackish waters) may produce a negative bias by this method. Alternate methods are available for these types of samples.

Arsenic (5+), at elevated levels, is a positive interference on colourimetric phosphate analysis.

SO4-IC-N-VA	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

TDS-VA	Water	Total Dissolved Solids by Gravimetric	APHA 2540 C - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-F-VA	Water	TKN in Water by Fluorescence	APHA 4500-NORG D.

This analysis is carried out using procedures adapted from APHA Method 4500-Norg D. "Block Digestion and Flow Injection Analysis". Total Kjeldahl Nitrogen is determined using block digestion followed by Flow-injection analysis with fluorescence detection.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.
Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

Reference Information

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.
mg/kg - milligrams per kilogram based on dry weight of sample.
mg/kg wwt - milligrams per kilogram based on wet weight of sample.
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.
mg/L - milligrams per litre.
< - Less than.
D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
LCS-ND	Lab Control Sample recovery was slightly outside ALS DQO. Reported non-detect results for associated samples were unaffected.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2124909 were received on 06-JUL-18 09:15.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Calcium (Ca)-Dissolved	MS-B	L2163156-1, -2, -3, -4, -5
Matrix Spike	Strontium (Sr)-Dissolved	MS-B	L2163156-1, -2, -3, -4, -5
Matrix Spike	Barium (Ba)-Total	MS-B	L2163156-5
Matrix Spike	Calcium (Ca)-Total	MS-B	L2163156-1, -2, -3, -4, -5
Matrix Spike	Calcium (Ca)-Total	MS-B	L2163156-5
Matrix Spike	Magnesium (Mg)-Total	MS-B	L2163156-5
Matrix Spike	Manganese (Mn)-Total	MS-B	L2163156-1, -2, -3, -4, -5
Matrix Spike	Manganese (Mn)-Total	MS-B	L2163156-5
Matrix Spike	Sodium (Na)-Total	MS-B	L2163156-5
Matrix Spike	Strontium (Sr)-Total	MS-B	L2163156-1, -2, -3, -4, -5
Matrix Spike	Strontium (Sr)-Total	MS-B	L2163156-5
Matrix Spike	Sulfur (S)-Total	MS-B	L2163156-5
Matrix Spike	Uranium (U)-Total	MS-B	L2163156-5
Matrix Spike	Ammonia, Total (as N)	MS-B	L2163156-1, -2, -3, -4

Qualifiers for Individual Parameters Listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-TITR-VA	Water	Alkalinity Species by Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

BOD5-VA	Water	Biochemical Oxygen Demand- 5 day	APHA 5210 B- BIOCHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5210 B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

CL-IC-N-VA	Water	Chloride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-COL-VA	Water	Chemical Oxygen Demand by Colorimetric	APHA 5220 D. CHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

EC-SCREEN-VA	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

F-IC-N-VA	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

HG-D-CVAA-VA	Water	Diss. Mercury in Water by CVAAS or CVAFS	APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

HG-T-CVAA-VA	Water	Total Mercury in Water by CVAAS or CVAFS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

		Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Reference Information

MET-D-CCMS-VA Water

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

MET-T-CCMS-VA Water Total Metals in Water by CRC ICPMS EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

NH3-F-VA Water Ammonia in Water by Fluorescence J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-L-IC-N-VA Water Nitrite in Water by IC (Low Level) EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-L-IC-N-VA Water Nitrate in Water by IC (Low Level) EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-PRES-COL-VA Water Total P in Water by Colour APHA 4500-P Phosphorus

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is determined colourimetrically after persulphate digestion of the sample.
Samples with very high dissolved solids (i.e. seawaters, brackish waters) may produce a negative bias by this method. Alternate methods are available for these types of samples.

Arsenic (5+), at elevated levels, is a positive interference on colourimetric phosphate analysis.

PH-PCT-VA Water pH by Meter (Automated) APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

PO4-DO-COL-VA Water Diss. Orthophosphate in Water by Colour APHA 4500-P Phosphorus

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.
Samples with very high dissolved solids (i.e. seawaters, brackish waters) may produce a negative bias by this method. Alternate methods are available for these types of samples.

Arsenic (5+), at elevated levels, is a positive interference on colourimetric phosphate analysis.

SO4-IC-N-VA Water Sulfate in Water by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

TKN-F-VA Water TKN in Water by Fluorescence APHA 4500-NORG D.

This analysis is carried out using procedures adapted from APHA Method 4500-Norg D. "Block Digestion and Flow Injection Analysis". Total Kjeldahl Nitrogen is determined using block digestion followed by Flow-injection analysis with fluorescence detection.

TSS-VA Water Total Suspended Solids by Gravimetric APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.
Samples containing very high dissolved solid content (i.e. seawaters, brackish waters) may produce a positive bias by this method. Alternate analysis methods are available for these types of samples.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA

Chain of Custody Numbers:

17-668818

Reference Information

GLOSSARY OF REPORT TERMS

Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.
mg/kg - milligrams per kilogram based on dry weight of sample.
mg/kg wwt - milligrams per kilogram based on wet weight of sample.
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.
mg/L - milligrams per litre.
< - Less than.
D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Quality Control Report

Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
Physical Tests							
pH by Meter (Automated)							
	1	10-SEP-18 13:00	14-SEP-18 17:14	0.25	100	hours	EHTR-FM
	2	10-SEP-18 13:00	14-SEP-18 11:32	0.25	95	hours	EHTR-FM
	3	10-SEP-18 13:00	14-SEP-18 11:32	0.25	95	hours	EHTR-FM
	4	10-SEP-18 13:00	14-SEP-18 11:32	0.25	95	hours	EHTR-FM
	5	10-SEP-18 13:00	14-SEP-18 11:32	0.25	95	hours	EHTR-FM

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2163156 were received on 12-SEP-18 12:25.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

* Please refer to the Reference Information section for an explanation of any qualifiers detected.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Calcium (Ca)-Dissolved	MS-B	L2163155-1
Matrix Spike	Strontium (Sr)-Dissolved	MS-B	L2163155-1
Matrix Spike	Sodium (Na)-Total	MS-B	L2163155-1

Qualifiers for Individual Parameters Listed:

Qualifier	Description
DTC	Dissolved concentration exceeds total. Results were confirmed by re-analysis.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-TITR-VA	Water	Alkalinity Species by Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

CL-IC-N-VA	Water	Chloride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-COL-VA	Water	Chemical Oxygen Demand by Colorimetric	APHA 5220 D. CHEMICAL OXYGEN DEMAND

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

EC-SCREEN-VA	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

F-IC-N-VA	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

HG-D-CVAA-VA	Water	Diss. Mercury in Water by CVAAS or CVAFS	APHA 3030B/EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

HG-T-CVAA-VA	Water	Total Mercury in Water by CVAAS or CVAFS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS or CVAFS.

MET-D-CCMS-VA	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

MET-T-CCMS-VA	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

NH3-F-VA	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-L-IC-N-VA	Water	Nitrite in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-L-IC-N-VA	Water	Nitrate in Water by IC (Low Level)	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Reference Information

P-T-PRES-COL-VA	Water	Total P in Water by Colour	APHA 4500-P Phosphorus

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is determined colourimetrically after persulphate digestion of the sample.
Samples with very high dissolved solids (i.e. seawaters, brackish waters) may produce a negative bias by this method. Alternate methods are available for these types of samples.

Arsenic (5+), at elevated levels, is a positive interference on colourimetric phosphate analysis.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

It is recommended that this analysis be conducted in the field.

SO4-IC-N-VA	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

TDS-VA	Water	Total Dissolved Solids by Gravimetric	APHA 2540 C - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-F-VA	Water	TKN in Water by Fluorescence	APHA 4500-NORG D.

This analysis is carried out using procedures adapted from APHA Method 4500-Norg D. "Block Digestion and Flow Injection Analysis". Total Kjeldahl Nitrogen is determined using block digestion followed by Flow-injection analysis with fluorescence detection.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA

Chain of Custody Numbers:

17-668817

GLOSSARY OF REPORT TERMS

Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.
mg/kg - milligrams per kilogram based on dry weight of sample.
mg/kg wwt - milligrams per kilogram based on wet weight of sample.
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.
mg/L - milligrams per litre.
< - Less than.
D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Quality Control Report

Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
Physical Tests							
pH by Meter (Automated)							
	1	10-SEP-18 11:15	14-SEP-18 17:14	0.25	102	hours	EHTR-FM

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2163155 were received on 12-SEP-18 12:25.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

NOTES

BC CSR AW-F — ater Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — tion Water Quality Guidelines for Protection of Livestock
BC CSR DW — gulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BC CSR AW-F — ater Quality Guidelines for Protection of Freshwater Aquatic Life
BC CSR LW — tion Water Quality Guidelines for Protection of Livestock
BC CSR DW — gulation Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard
Standards shown are from the BC Contaminated Sites Regulation (CSR; BC Reg. 375/96, O.C. 1480/96 and M40/2019, includes amendments up to BC Regs. 11/2019 and 13/2019, updated to 24 Jan 2019)

QAQC = quality assurance/quality control; FD = field duplicate;

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BCWQG AWF Long-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term	BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW	BC Water Quality Guidelines for Drinking Water

Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BCWQG AWF Long-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW — BC Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with temperature
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate

NOTES

BCWQG AWF Long-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Chronic Long-term Average
BCWQG AWF Short-term — BC Water Quality Guidelines for Freshwater Aquatic Life - Short-term Maximum
BCWQG DW — BC Water Quality Guidelines for Drinking Water
Italics indicate that the laboratory detection limit exceeds the applicable standard.
British Columbia Approved and Working (or interim) Water Quality Guidelines (BC WQG),
H = standard is hardness dependent; pH = standard is pH dependent; Cl = standard is chloride dependent; T = standard varies with
V = Standard is valence dependent VI refers to chromium VI and III refers to chromium III; Ca = standard is calcium dependent
* = for ammonia guideline, an average temperature of 10 degrees Celsius and a pH of 7.5 was chosen where no data was available
MAC = Maximum Acceptable Concentration
AO = Aesthetic Objective
QAQC = Quality Assurance and Control; FDA = Field Duplicate Available; FD = Field Duplicate
